JOURNAL OF AIRCRAFT
Volume 35, No. 6, November–December 1998

1998 *Journal of Aircraft* Index

How to Use the Index

In the Subject Index, pages 993–998, each technical paper is listed under a maximum of three appropriate headings. Note the number in boldface type following each paper title, and use that number to locate the paper in the Chronological Index. The Author Index, pages 999–1000, lists all authors associated with a given technical paper. The locating numbers are identical to those in the Subject Index. The Chronological Index, pages 1001–1006, lists all papers by their unique code numbers. This listing contains titles, authors and their affiliations, and volume, issue number, and page where the paper appeared. It also gives the AIAA paper number, if any, on which the article was based, as well as the "CP" or conference volume number if the paper was published in a bound collection of meetings papers. Comments, Replies, and Errata are listed directly beneath the paper to which they refer. If the paper to which they refer was published prior to 1998, that paper also will appear in the Chronological Index. Authors of Comments also are listed in the Author Index.

Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

Simple Numerical Method to Compute Viscous Lift Loss of Wings C98-003
Shape Optimizing Nacelle near Flat-Plate Wing Using Multiblock Sensitivity Analysis C98-004
Computational Study of Transonic Equivalence Rule with Lift C98-005
Pitch Rate and Reynolds Number Effects on Unsteady Boundary-Layer Transition and Separation C98-006
Separated Flows Around Spoilers and Forward-Facing Flaps C98-007
Roll–Yaw Control at High Angle of Attack by Forebody Tangential Blowing C98-009
Numerical Analysis of the Interference Effect of Propeller Slipstream on Aircraft Flowfield C98-011
New Adaptive Wall Test Section for Three-Dimensional Wind-Tunnel Testing C98-013
Control of Leading-Edge Vortices with Suction C98-025
Computation of the Aerodynamic Characteristics of a Subsonic Transport C98-029
Gurney Flap Experiments on Airfoils, Wings, and Reflection Plane Model C98-032
Instantaneous Crossflow Topology on a Delta Wing in Presence of Vortex Breakdown C98-034
Cellular Structures in the Flow over the Flap of a Two-Element Wing C98-036
Hybrid Airfoil Design Method to Simulate Full-Scale Ice Accretion Throughout a Given α Range C98-037
Prediction and Measurement of Blade–Vortex Interaction C98-041
Aerodynamic Characteristics of a Gyroplane Configuration C98-043
Load Measurements on the Leading-Edge Extension, Wing, and Body of an F/A-18 C98-046
Reduced-Order Aerodynamic Model and Its Application to a Nonlinear Aeroelastic System C98-051
Static Aeroelastic Effects on a Transonic Indicial Response Wing Flutter Calculation C98-052
Drag Reduction and Shape Optimization of Airship Bodies C98-055
Power Requirements for Large-Amplitude Flapping Flight C98-056
Coupled Navier–Stokes and Optimizer Analysis of a Transonic Wing C98-057
Multipoint Inverse Method for Multielement Airfoil Design C98-061
Aerodynamic Optimization Using Sensitivity Derivatives from a Three-Dimensional Supersonic Euler Code C98-062
Multizone Chimera Algorithm for Solving the Full-Potential Equation C98-063
Lift-Enhancing Tabs on Swept, Three-Dimensional High-Lift Systems C98-074
Spanwise Camber and Quasisteady Effects During Wing Rock C98-075
High-Incidence Airfoil Aerodynamics Improvement by Leading-Edge Oscillating Flap C98-080
Sweep Effect on Parameters Governing Control of Separation by Periodic Excitation C98-081
Wind-Tunnel Aerodynamics in Rotary Tests of Combat Aircraft Models C98-083
High-Performance Airfoil with Moving Surface Boundary-Layer Control C98-086
Computational Study of Subsonic Flow over a Delta Canard–Wing–Body Configuration C98-087
Appraisal of Numerical Methods in Predicting the Aerodynamics of Forward-Swept Wings C98-088
Empirical Model of Transport and Decay of Aircraft Wake Vortices C98-100
Low-Reynolds-Number Effects on Delta-Wing Aerodynamics C98-101
Effects of Ballistic Damage on the Aerodynamics of Helicopter Rotor Airfoils C98-109
Numerical Simulation of the Flowfield Around Airfoil with Stationary or Oscillating Spoiler C98-110
Secondary Correction Formula for Two-Dimensional Lift Coefficient Measured in a Wind Tunnel C98-111
Parallel Interaction of Incident Vortex Array with Oscillating Airfoil C98-114
Numerical Representation of Pitching and Nonpitching Airfoils Undergoing Linear Acceleration C98-117
Frequency Effects on Dynamic Stability Derivatives Obtained from Small-Amplitude Oscillatory Testing C98-119
Navier–Stokes Analysis of the Flow About a Flap Edge C98-130
Two-Dimensional Airfoil Performance Degradation Because of Simulated Freezing Drizzle C98-139
Flowfield and Acoustic Measurements from a Model Tiltrotor in Hover C98-141
Wake Forces Implied in the Theodorsen and Goldstein Theories of Propellers C98-142
Development of an Unstructured Mesh Method C98-147
Effects of Asymmetric Leading-Edge Flap Deflection on Delta Wings in Roll C98-148
Identifying Aerial Bomb's Aerodynamic Drag Coefficient Curve Using Optimal Dynamic Fitting Method C98-149
Correlation for the Estimation of Afterbody Drag with Hot Jet Exhaust C98-153
Lift Enhancement of a Wing/Strake Configuration Using Pneumatic Blowing C98-154

Aeroelasticity and Aeroservoelasticity

Unsteady Aeroelastic Optimization in the Transonic Regime C98-008
Static Aeroelastic Considerations for Circulation Control Airfoils C98-020
Sensitivity of Aeroelastic Efficiencies of Subsonic Delta Wings to Partial Root Support C98-022
Role of Modal Interchange on the Flutter of Laminated Composite Wings C98-023
Minimum-State Approximation: A Pure Lag Approach C98-024
Neural Network Parameter Extraction with Application to Flutter Signals C98-026
Experimental Active Control of a Typical Section Using a Trailing-Edge Flap C98-035
Aeroelastic Computations on Wing–Body–Control Configurations on Parallel Computers C98-045
Reduced-Order Aerodynamic Model and Its Application to a Nonlinear Aeroelastic System C98-051
Static Aeroelastic Effects on a Transonic Indicial Response Wing Flutter Calculation C98-052
Modal-Based Enhancement of Integrated Design Optimization Schemes C98-066
Active Control of Store-Induced Flutter in Incompressible Flow C98-068
Multi-Input/Multi-Output Adaptive Active Flutter Suppression for a Wing Model C98-069
Incorporating Flight Data into a Robust Aeroelastic Model C98-070
Aeroelastic Design Optimization with Experimental Verification C98-079
Sensitivity Analysis for Transonic Unsteady Aeroelastic Constraints C98-090
Optimized Aeroelastic Couplings for Alleviation of Helicopter Ground Resonance C98-091
Simulation of Helicopter Rotor-System Structural Damage, Blade Mistracking, Friction, and Freeplay C98-092
Aeroelastic Response of a Rigid Wing Supported by Nonlinear Springs C98-095
Effect of Aspect Ratio and Ply Orientation on Aeroelastic Response of Composite Plates C98-102
Unsteady Aerodynamic Forces and Aeroelastic Response for External Store of an Aircraft C98-107
Aeroelastic Stability Investigation of a Composite Hingeless Rotor in Hover C98-121
Accuracy and Coupling Issues of Aeroelastic Navier–Stokes Solutions on Deforming Meshes C98-122
Significance of Wash-Out on the Flutter Characteristics of Composite Wings C98-126
Comparison of Aeroelastic Excitation Mechanisms C98-129
Flutter Control of Wing Boxes Using Piezoelectric Actuators C98-145

Communication and Air Traffic Control

Study on Crowded Two-Dimensional Airspace—Self-Organized Criticality C98-047

Configuration Design

Hybrid Airfoil Design Method to Simulate Full-Scale Ice Accretion Throughout a Given α Range C98-037

Engine–Airframe Integration During Conceptual Design for Military Application C98-059
Cost/Time Analysis for Theoretical Aircraft Production C98-098
Aerodynamic Design of Transonic Wings Using the Target Pressure Optimization Approach C98-106
Numerical Simulation of the Flowfield Around Airfoil with Stationary or Oscillating Spoiler C98-110
Enhanced Multiobjective Technique for Multidisciplinary Design Optimization C98-128
Neural Network and Regression Approximations in High-Speed Civil Aircraft Design Optimization C98-131

Economics

Cost/Time Analysis for Theoretical Aircraft Production C98-098

Flight Mechanics

Roll–Yaw Control at High Angle of Attack by Forebody Tangential Blowing C98-009
Motion Analysis of Two Cable-Connected Bodies in Atmospheric Free-Fall C98-010
Forebody Flow Control for Extended High-Angle-of-Attack Maneuvers C98-033
Thrust Offset Effect on Longitudinal Dynamic Stability C98-054
Spanwise Camber and Quasisteady Effects During Wing Rock C98-075
Analysis of Aircraft Agility on Maximum Performance Maneuvers C98-084
Effects of Asymmetric Leading-Edge Flap Deflection on Delta Wings in Roll C98-148
Altitude Loss in a Split-'S' Maneuver C98-155

Flight Operations

Development of the C-17 Formation Airdrop Element Geometry C98-028
Definition of Primary Flight Reference C98-076
Empirical Model of Transport and Decay of Aircraft Wake Vortices C98-100
Certification and Operation of Helicopters in Icing Environments C98-143

General Aviation

Gurney Flap Experiments on Airfoils, Wings, and Reflection Plane Model C98-032

Lighter-Than-Air Systems

Drag Reduction and Shape Optimization of Airship Bodies C98-055

Man/Machine Interface

Definition of Primary Flight Reference C98-076

Manufacturing

Cost/Time Analysis for Theoretical Aircraft Production C98-098

Military Missions

Development of the C-17 Formation Airdrop Element Geometry C98-028

Noise

Effect of Wake Structure on Blade–Vortex Interaction Phenomena: Acoustic Prediction and Validation C98-042
Active Control of Aircraft Cabin Noise Using Collocated Structural Actuators and Sensors C98-050
Mean Flow Refraction Corrections for the Kirchoff Method C98-104
Modal Technique for Active Control of Tones Radiated from a Ducted Fan C98-116
Enhanced Multiobjective Technique for Multidisciplinary Design Optimization C98-128
Flowfield and Acoustic Measurements from a Model Tiltrotor in Hover C98-141

Performance

Power Requirements for Large-Amplitude Flapping Flight C98-056
Analysis of Aircraft Agility on Maximum Performance Maneuvers C98-084
Approximate Performance of Periodic Hypersonic Cruise Trajectories for Global Reach C98-133

Powerplant Integration

Shape Optimizing Nacelle near Flat-Plate Wing Using Multiblock Sensitivity Analysis C98-004
Deflection of Turbofan Exhaust Streams for Enhanced Engine/Nacelle Integration C98-014
Engine–Airframe Integration During Conceptual Design for Military Application C98-059

Propeller and Rotor Systems

Effects of Ballistic Damage on the Aerodynamics of Helicopter Rotor Airfoils C98-109
Wake Forces Implied in the Theodorsen and Goldstein Theories of Propellers C98-142

Rotorcraft

Active Control of Helicopter Blade Stall C98-012
Aerodynamic Characteristics of a Gyroplane Configuration C98-043
Formulation of a Comprehensive Aeroelastic Analysis for Tilt-Rotor Aircraft C98-044
Aeroelastic Analysis of Transient Blade Dynamics During Shipboard Engage/Disengage Operations C98-067
Optimized Aeroelastic Couplings for Alleviation of Helicopter Ground Resonance C98-091
Simulation of Helicopter Rotor-System Structural Damage, Blade Mistracking, Friction, and Freeplay C98-092
Effects of Ballistic Damage on the Aerodynamics of Helicopter Rotor Airfoils C98-109
Parallel Interaction of Incident Vortex Array with Oscillating Airfoil C98-114
Aeroelastic Stability Investigation of a Composite Hingeless Rotor in Hover C98-121
Flowfield and Acoustic Measurements from a Model Tiltrotor in Hover C98-141
Certification and Operation of Helicopters in Icing Environments C98-143

Safety

Motion Analysis of Two Cable-Connected Bodies in Atmospheric Free-Fall C98-010
Ice Accretion Prediction on Multielement Airfoils C98-038
Analytical Methodology for Predicting Widespread Fatigue Damage Onset in Fuselage Structure C98-048
Surface Windshear Alert System, Part 1: Prototype Development C98-064
Surface Windshear Alert System, Part 2: Field Tests C98-065
Reconstruction of the 1994 Pittsburgh Airplane Accident Using a Computer Simulation C98-105
Accelerated Vibration Life Tests of Threadlocking Adhesive C98-124
Certification and Operation of Helicopters in Icing Environments C98-143

Simulation

Motion Simulation Capabilities of Three-Degree-of-Freedom Flight Simulators C98-001
Estimation of Wind from Airplane States in Coordinated Flight C98-030
Reconstruction of the 1994 Pittsburgh Airplane Accident Using a Computer Simulation C98-105

STOL/VTOL/STOVL

Prediction and Measurement of Blade–Vortex Interaction C98-041
Effect of Wake Structure on Blade–Vortex Interaction Phenomena: Acoustic Prediction and Validation C98-042

Structural Design (Including Loads)

Unsteady Aeroelastic Optimization in the Transonic Regime C98-008
Boundary Element Analysis of Fatigue Crack Propagation in Stiffened Panels C98-016
Methodology for Implementing Fracture Mechanics in Global Structural Design of Aircraft C98-017
Load Measurements on the Leading-Edge Extension, Wing, and Body of an F/A-18 C98-046
Analytical Methodology for Predicting Widespread Fatigue Damage Onset in Fuselage Structure C98-048

Sensitivity Analysis for Transonic Unsteady Aeroelastic Constraints C98-090
Further Refinement of the Subsonic Doublet-Lattice Method C98-112

Structural Materials

Analytical Methodology for Predicting Widespread Fatigue Damage Onset in Fuselage Structure C98-048

Testing, Flight and Ground

New Adaptive Wall Test Section for Three-Dimensional Wind-Tunnel Testing C98-013
Development of the C-17 Formation Airdrop Element Geometry C98-028
Aerodynamic Characteristics of a Gyroplane Configuration C98-043
Optimum Jack Loads for Static and Fatigue Tests C98-093
Aeroelastic Stability Investigation of a Composite Hingeless Rotor in Hover C98-121
Comparison of Aeroelastic Excitation Mechanisms C98-129
Altitude Loss in a Split-'S' Maneuver C98-155

Vibration

Active Suppression of Aircraft Panel Vibration with Piezoceramic Strain Actuators C98-018
Nonlinear Model for Aircraft Brake Squeal Analysis: Model Description and Solution Methodology C98-096
Nonlinear Model for Aircraft Brake Squeal Analysis: Stability Analysis and Parametric Studies C98-097
Effect of Aspect Ratio and Ply Orientation on Aeroelastic Response of Composite Plates C98-102
Accelerated Vibration Life Tests of Threadlocking Adhesive C98-124
Free Vibration of Thick Generally Laminated Quadrilateral Plates Having Arbitrarily Located Point Supports C98-146

Weather Hazards

Numerical Simulations of Commercial Aircraft Wakes Subjected to Airport Surface Weather Conditions C98-002
Cloud Particle Measurements in Thunderstorm Anvils and Possible Weather Threat to Aviation C98-015
Ice Accretion Prediction on Multielement Airfoils C98-038
Surface Windshear Alert System, Part 1: Prototype Development C98-064
Surface Windshear Alert System, Part 2: Field Tests C98-065
Two-Dimensional Airfoil Performance Degradation Because of Simulated Freezing Drizzle C98-139
Characterizing the Supercooled Large Droplet Environment with Corresponding Turboprop Aircraft Response C98-140

Fluid Dynamics

Aeroacoustics

Effect of Wake Structure on Blade–Vortex Interaction Phenomena: Acoustic Prediction and Validation C98-042
Mean Flow Refraction Corrections for the Kirchoff Method C98-104
Modal Technique for Active Control of Tones Radiated from a Ducted Fan C98-116
Enhanced Multiobjective Technique for Multidisciplinary Design Optimization C98-128

Boundary Layers and Heat Transfer—Turbulent

Effects of Fin and Jet Vortex Generators on the Crossflow C98-058
Modeling Turbulence in the Presence of Adverse Pressure Gradients C98-077

Boundary-Layer Stability and Transition

Pitch Rate and Reynolds Number Effects on Unsteady Boundary-Layer Transition and Separation C98-006
Fully Three-Dimensional Transition Prediction on Swept Wings in Transonic Flows C98-040
Transition Closure Model for Predicting Transition Onset C98-118
Comparison of Boundary-Layer Transition Predictions Using Flight Test Data C98-137

Computational Fluid Dynamics

Simple Numerical Method to Compute Viscous Lift Loss of Wings C98-003
Shape Optimizing Nacelle near Flat-Plate Wing Using Multiblock Sensitivity Analysis C98-004
Numerical Analysis of the Interference Effect of Propeller Slipstream on Aircraft Flowfield C98-011
Computation of the Aerodynamic Characteristics of a Subsonic Transport C98-029
Fully Three-Dimensional Transition Prediction on Swept Wings in Transonic Flows C98-040
Coupled Navier–Stokes and Optimizer Analysis of a Transonic Wing C98-057
Aerodynamic Optimization Using Sensitivity Derivatives from a Three-Dimensional Supersonic Euler Code C98-062
Multizone Chimera Algorithm for Solving the Full-Potential Equation C98-063
Lift-Enhancing Tabs on Swept, Three-Dimensional High-Lift Systems C98-074
Modeling Turbulence in the Presence of Adverse Pressure Gradients C98-077
Computational Study of Subsonic Flow over a Delta Canard–Wing–Body Configuration C98-087
Appraisal of Numerical Methods in Predicting the Aerodynamics of Forward-Swept Wings C98-088
Numerical Simulation of the Flowfield Around Airfoil with Stationary or Oscillating Spoiler C98-110
Wing-Tip Vortex Calculations Using a High-Accuracy Scheme C98-113
Airfoil Wave-Drag Prediction Using Euler Solutions of Transonic Flows C98-115
Numerical Representation of Pitching and Nonpitching Airfoils Undergoing Linear Acceleration C98-117
Transition Closure Model for Predicting Transition Onset C98-118
Accuracy and Coupling Issues of Aeroelastic Navier–Stokes Solutions on Deforming Meshes C98-122
Navier–Stokes Analysis of the Flow About a Flap Edge C98-130
Characterization of the Flowfield near a Wrap-Around Fin at Mach 2.8 C98-134
Development of an Unstructured Mesh Method C98-147

Inlet, Nozzle, Diffuser, and Channel Flows

Deflection of Turbofan Exhaust Streams for Enhanced Engine/Nacelle Integration C98-014
Cloud Particle Measurements in Thunderstorm Anvils and Possible Weather Threat to Aviation C98-015
Simplified Method for Testing Finite Wings in Wind Tunnels with Two Adaptive Walls C98-073
Vortex-Generator Installation Studies on Steady-State and Dynamic Distortion C98-082
Development of Vortex Generator Use for a Transitioning High-Speed Inlet C98-085
Investigations of High-Speed Civil Transport Inlet Unstart at Angle of Attack C98-132

Jets, Wakes, and Viscid-Inviscid Flow Interactions

Numerical Simulations of Commercial Aircraft Wakes Subjected to Airport Surface Weather Conditions C98-002
Mean Flow Refraction Corrections for the Kirchoff Method C98-104
Characterization of the Flowfield near a Wrap-Around Fin at Mach 2.8 C98-134
Wake Forces Implied in the Theodorsen and Goldstein Theories of Propellers C98-142
Correlation for the Estimation of Afterbody Drag with Hot Jet Exhaust C98-153
Lift Enhancement of a Wing/Strake Configuration Using Pneumatic Blowing C98-154

Separated Flows

Separated Flows Around Spoilers and Forward-Facing Flaps C98-007
Control of Leading-Edge Vortices with Suction C98-025
Cellular Structures in the Flow over the Flap of a Two-Element Wing C98-036
Effects of Fin and Jet Vortex Generators on the Crossflow C98-058
Spanwise Camber and Quasisteady Effects During Wing Rock C98-075
Modeling Turbulence in the Presence of Adverse Pressure Gradients C98-077

High-Incidence Airfoil Aerodynamics Improvement by Leading-Edge Oscillating Flap C98-080
Sweep Effect on Parameters Governing Control of Separation by Periodic Excitation C98-081
High-Performance Airfoil with Moving Surface Boundary-Layer Control C98-086
Low-Reynolds-Number Effects on Delta-Wing Aerodynamics C98-101
Parallel Interaction of Incident Vortex Array with Oscillating Airfoil C98-114
Effect of Fuselage Geometry on Delta-Wing Vortex Breakdown C98-138

Shock Waves and Detonations

Comparison of Shock Calculation Methods C98-099

Subsonic Flow

Numerical Analysis of the Interference Effect of Propeller Slipstream on Aircraft Flowfield C98-011
Sensitivity of Subsonic Stability Derivatives of Free Aircraft to Geometric/Tip-Store Parameters C98-021
Sensitivity of Aeroelastic Efficiencies of Subsonic Delta Wings to Partial Root Support C98-022
Simulations of Wind Along Flight Trajectories in the Ocean Surface Layer C98-027
Multipoint Inverse Method for Multielement Airfoil Design C98-061
Simplified Method for Testing Finite Wings in Wind Tunnels with Two Adaptive Walls C98-073
Lift-Enhancing Tabs on Swept, Three-Dimensional High-Lift Systems C98-074
Wind-Tunnel Aerodynamics in Rotary Tests of Combat Aircraft Models C98-083
Arbitrary Accuracy Integration Scheme for the Subsonic Doublet Lattice Method C98-150
Convergence of the Subsonic Doublet Lattice Method C98-151

Supersonic Flow

Aerodynamic Optimization Using Sensitivity Derivatives from a Three-Dimensional Supersonic Euler Code C98-062
Comparison of Shock Calculation Methods C98-099

Transonic Flow

Computational Study of Transonic Equivalence Rule with Lift C98-005
Unsteady Aeroelastic Optimization in the Transonic Regime C98-008
Coupled Navier–Stokes and Optimizer Analysis of a Transonic Wing C98-057
Multizone Chimera Algorithm for Solving the Full-Potential Equation C98-063
Appraisal of Numerical Methods in Predicting the Aerodynamics of Forward-Swept Wings C98-088
Sensitivity Analysis for Transonic Unsteady Aeroelastic Constraints C98-090
Aerodynamic Design of Transonic Wings Using the Target Pressure Optimization Approach C98-106
Airfoil Wave-Drag Prediction Using Euler Solutions of Transonic Flows C98-115
Perturbation Solution of Dynamic Stability Derivatives over Pointed Bodies of Revolution C98-127
Comparison of Boundary-Layer Transition Predictions Using Flight Test Data C98-137

Unsteady Flows

Pitch Rate and Reynolds Number Effects on Unsteady Boundary-Layer Transition and Separation C98-006
Separated Flows Around Spoilers and Forward-Facing Flaps C98-007
Cellular Structures in the Flow over the Flap of a Two-Element Wing C98-036
Reduced-Order Aerodynamic Model and Its Application to a Nonlinear Aeroelastic System C98-051
Wind-Tunnel Aerodynamics in Rotary Tests of Combat Aircraft Models C98-083
High-Performance Airfoil with Moving Surface Boundary-Layer Control C98-086
Unsteady Aerodynamic Forces and Aeroelastic Response for External Store of an Aircraft C98-107
Further Refinement of the Subsonic Doublet-Lattice Method C98-112
Numerical Representation of Pitching and Nonpitching Airfoils Undergoing Linear Acceleration C98-117
Fin Buffet Pressure Evaluation Based on Measured Flowfield Velocities C98-123
Perturbation Solution of Dynamic Stability Derivatives over Pointed Bodies of Revolution C98-127
Investigations of High-Speed Civil Transport Inlet Unstart at Angle of Attack C98-132
Effect of Fuselage Geometry on Delta-Wing Vortex Breakdown C98-138
Effects of Asymmetric Leading-Edge Flap Deflection on Delta Wings in Roll C98-148
Arbitrary Accuracy Integration Scheme for the Subsonic Doublet Lattice Method C98-150
Convergence of the Subsonic Doublet Lattice Method C98-151
Rapid Prediction of Wing Rock for Slender Delta-Wing Configurations C98-152

Vortices

Numerical Simulations of Commercial Aircraft Wakes Subjected to Airport Surface Weather Conditions C98-002
Control of Leading-Edge Vortices with Suction C98-025
Forebody Flow Control for Extended High-Angle-of-Attack Maneuvers C98-033
Prediction and Measurement of Blade–Vortex Interaction C98-041
Effects of Fin and Jet Vortex Generators on the Crossflow C98-058
Empirical Model of Transport and Decay of Aircraft Wake Vortices C98-100
Low-Reynolds-Number Effects on Delta-Wing Aerodynamics C98-101
Wing-Tip Vortex Calculations Using a High-Accuracy Scheme C98-113
Fin Buffet Pressure Evaluation Based on Measured Flowfield Velocities C98-123
Navier–Stokes Analysis of the Flow About a Flap Edge C98-130
Effect of Fuselage Geometry on Delta-Wing Vortex Breakdown C98-138
Rapid Prediction of Wing Rock for Slender Delta-Wing Configurations C98-152

Guidance, Control, and Dynamics Technology

Aircraft Dynamics

Minimum-State Approximation: A Pure Lag Approach C98-024
Stability of a Towed Body C98-031
Coupled Force and Moment Parameter Estimation for Aircraft C98-039
Multiple Attractors in Inertia-Coupled Velocity-Vector Roll Maneuvers of Airplanes C98-103
Aircraft Time Constant and Flying "On the Step" C98-125
Rapid Prediction of Wing Rock for Slender Delta-Wing Configurations C98-152

Aircraft Guidance

Approximate Performance of Periodic Hypersonic Cruise Trajectories for Global Reach C98-133

Aircraft Stability and Control

Roll–Yaw Control at High Angle of Attack by Forebody Tangential Blowing C98-009
Static Aeroelastic Considerations for Circulation Control Airfoils C98-020
Stability of a Towed Body C98-031
Forebody Flow Control for Extended High-Angle-of-Attack Maneuvers C98-033
Thrust Offset Effect on Longitudinal Dynamic Stability C98-054
Multiple Attractors in Inertia-Coupled Velocity-Vector Roll Maneuvers of Airplanes C98-103
Reconstruction of the 1994 Pittsburgh Airplane Accident Using a Computer Simulation C98-105
Frequency Effects on Dynamic Stability Derivatives Obtained from Small-Amplitude Oscillatory Testing C98-119

Artificial Intelligence

Multilevel Simulation and Numerical Optimization of Complex Engineering Designs C98-060

Control System Design

Experimental Active Control of a Typical Section Using a Trailing-Edge Flap C98-035

Dynamics

Motion Analysis of Two Cable-Connected Bodies in Atmospheric Free-Fall C98-010
Stability of a Towed Body C98-031
Nonlinear Model for Aircraft Brake Squeal Analysis: Model Description and Solution Methodology C98-096
Nonlinear Model for Aircraft Brake Squeal Analysis: Stability Analysis and Parametric Studies C98-097
Identifying Aerial Bomb's Aerodynamic Drag Coefficient Curve Using Optimal Dynamic Fitting Method C98-149

Flight Mechanics

Multiple Attractors in Inertia-Coupled Velocity-Vector Roll Maneuvers of Airplanes C98-103
Frequency Effects on Dynamic Stability Derivatives Obtained from Small-Amplitude Oscillatory Testing C98-119
Aircraft Time Constant and Flying "On the Step" C98-125
Altitude Loss in a Split-'S' Maneuver C98-155

Handling Qualities

Aircraft Time Constant and Flying "On the Step" C98-125

Missile Guidance and Control

Simulations of Wind Along Flight Trajectories in the Ocean Surface Layer C98-027

Optimization Techniques

Multilevel Simulation and Numerical Optimization of Complex Engineering Designs C98-060
Experiences with Automatic Differentiation Applied to a Volume Grid Generation Code C98-089

Signal Processing

Neural Network Parameter Extraction with Application to Flutter Signals C98-026

Software Technology

Experiences with Automatic Differentiation Applied to a Volume Grid Generation Code C98-089

State Estimation

Estimation of Wind from Airplane States in Coordinated Flight C98-030

Structural Control

Active Control of Aircraft Cabin Noise Using Collocated Structural Actuators and Sensors C98-050

System Identification

Coupled Force and Moment Parameter Estimation for Aircraft C98-039
Incorporating Flight Data into a Robust Aeroelastic Model C98-070

Trajectory Optimization

Approximate Performance of Periodic Hypersonic Cruise Trajectories for Global Reach C98-133

Interdisciplinary Topics

Analytical and Numerical Methods

Boundary Element Analysis of Fatigue Crack Propagation in Stiffened Panels C98-016
Experiences with Automatic Differentiation Applied to a Volume Grid Generation Code C98-089
Comparison of Shock Calculation Methods C98-099

Atmospheric and Space Sciences

Two-Dimensional Airfoil Performance Degradation Because of Simulated Freezing Drizzle C98-139
Characterizing the Supercooled Large Droplet Environment with Corresponding Turboprop Aircraft Response C98-140

Human Factors

Definition of Primary Flight Reference C98-076

Reliability, Maintainability, and Logistics Support

Nonstationary Random Parametric Vibration in Light Aircraft Landing Gear C98-019

Research Facilities and Instrumentation

Secondary Correction Formula for Two-Dimensional Lift Coefficient Measured in a Wind Tunnel C98-111

Safety

Ice Accretion Prediction on Multielement Airfoils C98-038

Launch Vehicle and Missile (LV/M) Technology

Aerodynamics

Simulations of Wind Along Flight Trajectories in the Ocean Surface Layer C98-027
Computational Study of Subsonic Flow over a Delta Canard–Wing–Body Configuration C98-087
Characterization of the Flowfield near a Wrap-Around Fin at Mach 2.8 C98-134

Simulation

Multilevel Simulation and Numerical Optimization of Complex Engineering Designs C98-060

Propulsion

Airbreathing Propulsion

Deflection of Turbofan Exhaust Streams for Enhanced Engine/Nacelle Integration C98-014
Development of Vortex Generator Use for a Transitioning High-Speed Inlet C98-085
Neural Network and Regression Approximations in High-Speed Civil Aircraft Design Optimization C98-131
Investigations of High-Speed Civil Transport Inlet Unstart at Angle of Attack C98-132

Structural Mechanics and Materials

Aeroelasticity and Control

Active Control of Helicopter Blade Stall C98-012
Static Aeroelastic Considerations for Circulation Control Airfoils C98-020
Sensitivity of Subsonic Stability Derivatives of Free Aircraft to Geometric/Tip-Store Parameters C98-021
Sensitivity of Aeroelastic Efficiencies of Subsonic Delta Wings to Partial Root Support C98-022
Role of Modal Interchange on the Flutter of Laminated Composite Wings C98-023
Experimental Active Control of a Typical Section Using a Trailing-Edge Flap C98-035
Formulation of a Comprehensive Aeroelastic Analysis for Tilt-Rotor Aircraft C98-044
Static Aeroelastic Effects on a Transonic Indicial Response Wing Flutter Calculation C98-052
Modal-Based Enhancement of Integrated Design Optimization Schemes C98-066
Aeroelastic Analysis of Transient Blade Dynamics During Shipboard Engage/Disengage Operations C98-067
Multi-Input/Multi-Output Adaptive Active Flutter Suppression for a Wing Model C98-069
Incorporating Flight Data into a Robust Aeroelastic Model C98-070
Aeroelastic Design Optimization with Experimental Verification C98-079
Optimized Aeroelastic Couplings for Alleviation of Helicopter Ground Resonance C98-091

Aeroelastic Response of a Rigid Wing Supported by Nonlinear Springs C98-095
Effect of Aspect Ratio and Ply Orientation on Aeroelastic Response of Composite Plates C98-102
Unsteady Aerodynamic Forces and Aeroelastic Response for External Store of an Aircraft C98-107
Further Refinement of the Subsonic Doublet-Lattice Method C98-112
Influence of Model Complexity and Aeroelastic Constraints on Multidisciplinary Optimization of Wings C98-120
Significance of Wash-Out on the Flutter Characteristics of Composite Wings C98-126
Comparison of Aeroelastic Excitation Mechanisms C98-129
Flutter Control of Wing Boxes Using Piezoelectric Actuators C98-145

Flexible and Active Structures

Active Suppression of Aircraft Panel Vibration with Piezoceramic Strain Actuators C98-018
Active Control of Aircraft Cabin Noise Using Collocated Structural Actuators and Sensors C98-050

Structural Composite Materials

Role of Modal Interchange on the Flutter of Laminated Composite Wings C98-023
Composite Patches as Reinforcements and Crack Arrestors in Aircraft Structures C98-049
Optimal Design of Grid-Stiffened Composite Panels Using Global and Local Buckling Analyses C98-071
Buckling Analysis of Laminated Fiber-Reinforced Doubly Curved Shallow Shells C98-078
Similarities Between Solid and Thin-Walled Composite Beams by Analytic Approach C98-094
Significance of Wash-Out on the Flutter Characteristics of Composite Wings C98-126
Behavior of Compression-Loaded Composite Panels with Stringer Terminations and Impact Damage C98-144
Free Vibration of Thick Generally Laminated Quadrilateral Plates Having Arbitrarily Located Point Supports C98-146

Structural Design

Influence of Model Complexity and Aeroelastic Constraints on Multidisciplinary Optimization of Wings C98-120
Behavior of Compression-Loaded Composite Panels with Stringer Terminations and Impact Damage C98-144
Flutter Control of Wing Boxes Using Piezoelectric Actuators C98-145

Structural Durability (Including Fatigue, Fracture, and Environmental Degradation)

Boundary Element Analysis of Fatigue Crack Propagation in Stiffened Panels C98-016
Methodology for Implementing Fracture Mechanics in Global Structural Design of Aircraft C98-017
Nonstationary Random Parametric Vibration in Light Aircraft Landing Gear C98-019
Composite Patches as Reinforcements and Crack Arrestors in Aircraft Structures C98-049
Damage Tolerance Implications of Corrosion Pillowing on Fuselage Lap Joints C98-072
Accelerated Vibration Life Tests of Threadlocking Adhesive C98-124

Structural Dynamics and Characterization

Nonstationary Random Parametric Vibration in Light Aircraft Landing Gear C98-019
Aeroelastic Analysis of Transient Blade Dynamics During Shipboard Engage/Disengage Operations C98-067
Optimum Jack Loads for Static and Fatigue Tests C98-093
Similarities Between Solid and Thin-Walled Composite Beams by Analytic Approach C98-094
Aeroelastic Response of a Rigid Wing Supported by Nonlinear Springs C98-095
Nonlinear Model for Aircraft Brake Squeal Analysis: Model Description and Solution Methodology C98-096
Nonlinear Model for Aircraft Brake Squeal Analysis: Stability Analysis and Parametric Studies C98-097

Structural Finite Elements

Methodology for Implementing Fracture Mechanics in Global Structural Design of Aircraft C98-017
Damage Tolerance Implications of Corrosion Pillowing on Fuselage Lap Joints C98-072
Buckling Analysis of Laminated Fiber-Reinforced Doubly Curved Shallow Shells C98-078
Behavior of Compression-Loaded Composite Panels with Stringer Terminations and Impact Damage C98-144

Structural Modeling

Composite Patches as Reinforcements and Crack Arrestors in Aircraft Structures C98-049
Similarities Between Solid and Thin-Walled Composite Beams by Analytic Approach C98-094
Free Vibration of Thick Generally Laminated Quadrilateral Plates Having Arbitrarily Located Point Supports C98-146

Structural Optimization

Modal-Based Enhancement of Integrated Design Optimization Schemes C98-066
Optimal Design of Grid-Stiffened Composite Panels Using Global and Local Buckling Analyses C98-071
Optimum Jack Loads for Static and Fatigue Tests C98-093
Influence of Model Complexity and Aeroelastic Constraints on Multidisciplinary Optimization of Wings C98-120

Structural Stability

Optimal Design of Grid-Stiffened Composite Panels Using Global and Local Buckling Analyses C98-071
Buckling Analysis of Laminated Fiber-Reinforced Doubly Curved Shallow Shells C98-078

Chronological Index

98-001 Motion Simulation Capabilities of Three-Degree-of-Freedom Flight Simulators. Nicolas A. Pouliot and Clément M. Gosselin, *Université Laval, Québec, Canada*; and Meyer A. Nahon, *University of Victoria, Canada* (**35**, 1, p. 9) Article based on AIAA Paper 96-3474 CP968

98-002 Numerical Simulations of Commercial Aircraft Wakes Subjected to Airport Surface Weather Conditions. Robert L. Ash, *Old Dominion University*; and Z. Charlie Zheng, *University of South Alabama* (**35**, 1, p. 18) Article based on AIAA Paper 96-0660

98-003 Simple Numerical Method to Compute Viscous Lift Loss of Wings. R. S. Crabbe, *National Research Council, Canada* (**35**, 1, p. 27) Article

98-004 Shape Optimizing Nacelle near Flat-Plate Wing Using Multiblock Sensitivity Analysis. Mohamed E. Eleshaky and Oktay Baysal, *Old Dominion University* (**35**, 1, p. 33) Article

98-005 Computational Study of Transonic Equivalence Rule with Lift. Shijun Luo, *Northwestern Polytechnical University, PRC*; and Lixia Wang, *General Electric Research and Development Center* (**35**, 1, p. 39) Article

98-006 Pitch Rate and Reynolds Number Effects on Unsteady Boundary-Layer Transition and Separation. Scott J. Schreck, *U.S. Air Force Office of Scientific Research*; William E. Faller, *Johns Hopkins University*; and Hank E. Helin, *U.S. Air Force Operational Test and Evaluation Center* (**35**, 1, p. 46) Article based on AIAA Paper 94-2256

98-007 Separated Flows Around Spoilers and Forward-Facing Flaps. W. W. H. Yeung and C. Xu, *Nanyang Technological University, Singapore* (**35**, 1, p. 53) Article

98-008 Unsteady Aeroelastic Optimization in the Transonic Regime. R. M. Kolonay, *U.S. Air Force Research Laboratory*; and Henry T. Y. Yang, *University of California, Santa Barbara* (**35**, 1, p. 60) Article

98-009 Roll–Yaw Control at High Angle of Attack by Forebody Tangential Blowing. Nelson Pedreiro, *EMBRAER, Brazil*; and Stephen M. Rock, Zeki Z. Celik, and Leonard Roberts, *Stanford University* (**35**, 1, p. 69) Article

98-010 Motion Analysis of Two Cable-Connected Bodies in Atmospheric Free-Fall. Shlomo Djerassi and Zvi Viderman, *RAFAEL, Ministry of Defense, Israel* (**35**, 1, p. 78) Article based on AIAA Paper 97-3492 CP9710

98-011 Numerical Analysis of the Interference Effect of Propeller Slipstream on Aircraft Flowfield. Qin E, Guowei Yang, and Fengwei Li, *Northwestern Polytechnical University, PRC* (**35**, 1, p. 84) Article

98-012 Active Control of Helicopter Blade Stall. Khanh Nguyen, *NASA Ames Research Center* (**35**, 1, p. 91) Article

98-013 New Adaptive Wall Test Section for Three-Dimensional Wind-Tunnel Testing. Byeong-Hee Chang and Bongzoo Sung, *Korea Aerospace Research Institute*; and Keun-Shik Chang, *Korea Advanced Institute of Science and Technology* (**35**, 1, p. 99) Article

98-014 Deflection of Turbofan Exhaust Streams for Enhanced Engine/Nacelle Integration. R. H. Tindell and F. Marconi, *Northrop Grumman Corporation*; I. Kalkhoran, *Polytechnic University*; and J. Yetter, *NASA Langley Research Center* (**35**, 1, p. 106) Article

98-015 Cloud Particle Measurements in Thunderstorm Anvils and Possible Weather Threat to Aviation. R. Paul Lawson and Leigh J. Angus, *SPEC, Incorporated*; and Andrew J. Heymsfield, *National Center for Atmospheric Research* (**35**, 1, p. 113) Article based on AIAA Paper 96-0400

98-016 Boundary Element Analysis of Fatigue Crack Propagation in Stiffened Panels. N. K. Salgado, *Empresa Brasileira de Aeronáutica, S.A., Brazil*; and M. H. Aliabadi, *University of London, England, UK* (**35**, 1, p. 122) Article

98-017 Methodology for Implementing Fracture Mechanics in Global Structural Design of Aircraft. Clifton D. Nees, *U.S. Air Force Research Laboratory*; and Robert A. Canfield, *U.S. Air Force Office of Scientific Research* (**35**, 1, p. 131) Article based on AIAA Paper 96-1429 CP962

98-018 Active Suppression of Aircraft Panel Vibration with Piezoceramic Strain Actuators. Jonathan D'Cruz, *Defence Science and Technology Organisation, Australia* (**35**, 1, p. 139) Article

98-019 Nonstationary Random Parametric Vibration in Light Aircraft Landing Gear. D. E. Huntington and C. S. Lyrintzis, *San Diego State University* (**35**, 1, p. 145) Article based on AIAA Paper 96-1360 CP962

98-020 Static Aeroelastic Considerations for Circulation Control Airfoils. Thomas A. Zeiler, *University of Alabama* (**35**, 1, p. 152) Engineering Note

98-021 Sensitivity of Subsonic Stability Derivatives of Free Aircraft to Geometric/Tip-Store Parameters. Ashok Joshi, *Indian Institute of Technology* (**35**, 1, p. 154) Engineering Note

98-022 Sensitivity of Aeroelastic Efficiencies of Subsonic Delta Wings to Partial Root Support. Ashok Joshi, *Indian Institute of Technology* (**35**, 1, p. 155) Engineering Note

98-023 Role of Modal Interchange on the Flutter of Laminated Composite Wings. G. A. Georghiades and J. R. Banerjee, *City University, England, UK* (**35**, 1, p. 157) Engineering Note

98-024 Minimum-State Approximation: A Pure Lag Approach. N. Balan and P. M. Mujumdar, *Indian Institute of Technology* (**35**, 1, p. 161) Engineering Note

98-025 Control of Leading-Edge Vortices with Suction. B. Badran, S. McCormick, and I. Gursul, *University of Cincinnati* (**35**, 1, p. 163) Engineering Note

98-026 Neural Network Parameter Extraction with Application to Flutter Signals. B. H. K. Lee, *National Research Council, Canada*; and Y. S. Wong, *University of Alberta, Canada* (**35**, 1, p. 165) Engineering Note

98-027 Simulations of Wind Along Flight Trajectories in the Ocean Surface Layer. Bård Venås and Lars R. Sætran, *Norwegian*

University of Science and Technology (**35**, 2, p. 169) Article based on AIAA Paper 97-0423

98-028 Development of the C-17 Formation Airdrop Element Geometry. William B. Blake, *U.S. Air Force Research Laboratory* (**35**, 2, p. 175) Article based on AIAA Paper 97-3578 CP9711

98-029 Computation of the Aerodynamic Characteristics of a Subsonic Transport. Lillianne P. Troeger and Gregory V. Selby, *Old Dominion University* (**35**, 2, p. 183) Article

98-030 Estimation of Wind from Airplane States in Coordinated Flight. Amnon Katz and Manu Sharma, *University of Alabama* (**35**, 2, p. 191) Article

98-031 Stability of a Towed Body. Bernard Etkin, *University of Toronto, Canada* (**35**, 2, p. 197) Article

98-032 Gurney Flap Experiments on Airfoils, Wings, and Reflection Plane Model. Roy Myose, Michael Papadakis, and Ismael Heron, *Wichita State University* (**35**, 2, p. 206) Article based on AIAA Paper 97-0034

98-033 Forebody Flow Control for Extended High-Angle-of-Attack Maneuvers. F. Hodgkin, *University of Bath, England, UK*; and N. J. Wood, *University of Manchester, England, UK* (**35**, 2, p. 212) Article

98-034 Instantaneous Crossflow Topology on a Delta Wing in Presence of Vortex Breakdown. K. M. Cipolla and D. Rockwell, *Lehigh University* (**35**, 2, p. 218) Article

98-035 Experimental Active Control of a Typical Section Using a Trailing-Edge Flap. Jeffrey S. Vipperman, Robert L. Clark, Mark Conner, and Earl H. Dowell, *Duke University* (**35**, 2, p. 224) Article

98-036 Cellular Structures in the Flow over the Flap of a Two-Element Wing. Steven A. Yon and Joseph Katz, *San Diego State University* (**35**, 2, p. 230) Article

98-037 Hybrid Airfoil Design Method to Simulate Full-Scale Ice Accretion Throughout a Given α Range. Farooq Saeed, Michael S. Selig, and Michael B. Bragg, *University of Illinois at Urbana–Champaign* (**35**, 2, p. 233) Article based on AIAA Paper 97-0054

98-038 Ice Accretion Prediction on Multielement Airfoils. Giuseppe Mingione and Vincenzo Brandi, *Italian Aerospace Research Center (CIRA)* (**35**, 2, p. 240) Article based on AIAA Paper 97-0177

98-039 Coupled Force and Moment Parameter Estimation for Aircraft. Yongseung Cho and M. G. Nagati, *Wichita State University* (**35**, 2, p. 247) Article based on AIAA Paper 96-0776

98-040 Fully Three-Dimensional Transition Prediction on Swept Wings in Transonic Flows. Marc Langlois, *Bombardier Aerospace Group, Canada*; Christian Masson, *École de Technologie Supérieure, Canada*; and Ion Paraschivoiu, *École Polytechnique de Montréale, Canada* (**35**, 2, p. 254) Article

98-041 Prediction and Measurement of Blade–Vortex Interaction. Chee Tung, *NASA Ames Research Center*; Roland Kube, *DLR, German Aerospace Research Establishment*; Thomas F. Brooks, *NASA Langley Research Center*; and Gilles Rahier, *ONERA, France* (**35**, 2, p. 260) Article

98-042 Effect of Wake Structure on Blade–Vortex Interaction Phenomena: Acoustic Prediction and Validation. Judith M. Gallman, *NASA Ames Research Center*; Klaus-J. Schultz, *DLR, German Aerospace Research Establishment*; Pierre Spiegel, *ONERA, France*; and Casey L. Burley, *NASA Langley Research Center* (**35**, 2, p. 267) Article

98-043 Aerodynamic Characteristics of a Gyroplane Configuration. F. N. Coton and L. Smrcek, *University of Glasgow, Scotland, UK*; and Z. Pátek, *Aeronautical Research and Test Institute, Czech Republic* (**35**, 2, p. 274) Article

98-044 Formulation of a Comprehensive Aeroelastic Analysis for Tilt-Rotor Aircraft. Venkataraman Srinivas and Inderjit Chopra, *University of Maryland* (**35**, 2, p. 280) Article based on AIAA Paper 96-1546 CP962

98-045 Aeroelastic Computations on Wing–Body–Control Configurations on Parallel Computers. Chansup Byun and Guru P. Guruswamy, *NASA Ames Research Center* (**35**, 2, p. 288) Article

98-046 Load Measurements on the Leading-Edge Extension, Wing, and Body of an F/A-18. B. H. K. Lee, *National Research Council, Canada*; and S. Marineau-Mes, *University of Ottawa, Canada* (**35**, 2, p. 295) Article

98-047 Study on Crowded Two-Dimensional Airspace—Self-Organized Criticality. Kuo-Chi Lin, *Institute for Simulation and Training*; Alex Sisti, *U.S. Air Force Research Laboratory*; and Lee Chow, *University of Central Florida* (**35**, 2, p. 301) Article

98-048 Analytical Methodology for Predicting Widespread Fatigue Damage Onset in Fuselage Structure. Charles E. Harris, James C. Newman Jr., Robert S. Piascik, and James H. Starnes Jr., *NASA Langley Research Center* (**35**, 2, p. 307) Article

98-049 Composite Patches as Reinforcements and Crack Arrestors in Aircraft Structures. M. R. Lena, J. C. Klug, and C. T. Sun, *Purdue University* (**35**, 2, p. 318) Article

98-050 Active Control of Aircraft Cabin Noise Using Collocated Structural Actuators and Sensors. A. Grewal, F. Nitzsche, and D. G. Zimcik, *National Research Council, Canada*; and B. Leigh, *De Havilland, Inc., Canada* (**35**, 2, p. 324) Article based on AIAA Paper 96-1274 CP963

98-051 Reduced-Order Aerodynamic Model and Its Application to a Nonlinear Aeroelastic System. Deman Tang, Mark D. Conner, and Earl H. Dowell, *Duke University* (**35**, 2, p. 332) Article

98-052 Static Aeroelastic Effects on a Transonic Indicial Response Wing Flutter Calculation. R. M. Kolonay, *U.S. Air Force Research Laboratory*; and Henry T. Y. Yang, *University of California, Santa Barbara* (**35**, 2, p. 339) Engineering Note based on AIAA Paper 96-3983 CP9611

98-053 Sensitivity of Open-Loop Typical Section Gust Response to Structural Parameters. Jeffrey B. Layton, *Clarkson University* (**35**, 2, p. 341) Engineering Note

98-054 Thrust Offset Effect on Longitudinal Dynamic Stability. A. W. Bloy, *University of Manchester, England, UK* (**35**, 2, p. 343) Engineering Note

C98-055 Drag Reduction and Shape Optimization of Airship Bodies. T. Lutz and S. Wagner, *University of Stuttgart, Germany* (**35**, 3, p. 345) Article based on AIAA Paper 97-1483 CP975

C98-056 Power Requirements for Large-Amplitude Flapping Flight. Kenneth C. Hall and Steven A. Pigott, *Duke University*; and Steven R. Hall, *Massachusetts Institute of Technology* (**35**, 3, p. 352) Article based on AIAA Paper 97-0827

C98-057 Coupled Navier–Stokes and Optimizer Analysis of a Transonic Wing. Roxana M. Greenman, *NASA Ames Research Center*; Samson Cheung, *MCAT, Inc.*; and Eugene L. Tu, *NASA Ames Research Center* (**35**, 3, p. 362) Article based on AIAA Paper 96-2486 CP965

C98-058 Effects of Fin and Jet Vortex Generators on the Crossflow. Todd G. Wetzel and Roger L. Simpson, *Virginia Polytechnic Institute and State University* (**35**, 3, p. 370) Article

C98-059 Engine–Airframe Integration During Conceptual Design for Military Application. Vivek Sanghi, S. Kishore Kumar, and V. Sundararajan, *Gas Turbine Research Establishment, India*; and S. K. Sane, *Indian Institute of Technology* (**35**, 3, p. 380) Article

C98-060 Multilevel Simulation and Numerical Optimization of Complex Engineering Designs. Mark Schwabacher, *National Institute of Standards and Technology*; and Andrew Gelsey, *Rutgers University* (**35**, 3, p. 387) Article based on AIAA Paper 96-4021 CP9611

C98-061 Multipoint Inverse Method for Multielement Airfoil Design. Ashok Gopalarathnam and Michael S. Selig, *University of Illinois at Urbana–Champaign* (**35**, 3, p. 398) Article based on AIAA Paper 96-2396 CP965

C98-062 Aerodynamic Optimization Using Sensitivity Derivatives from a Three-Dimensional Supersonic Euler Code. Vamshi Mohan Korivi, *Old Dominion University*; Perry A. Newman, *NASA Langley Research Center*; and Arthur C. Taylor III, *Old Dominion University* (**35**, 3, p. 405) Article based on AIAA Paper 94-4270 CP9413

C98-063 Multizone Chimera Algorithm for Solving the Full-Potential Equation. Terry L. Holst, *NASA Ames Research Center* (**35**, 3, p. 412) Article

C98-064 Surface Windshear Alert System, Part 1: Prototype Development. H.-T Liu, C. Golborne, Y. Bun, and M. Bartel, *QUEST Integrated, Inc.* (**35**, 3, p. 422) Article

C98-065 Surface Windshear Alert System, Part 2: Field Tests. H.-T Liu, *QUEST Integrated, Inc.* (**35**, 3, p. 429) Article

C98-066 Modal-Based Enhancement of Integrated Design Optimization Schemes. Mordechay Karpel, *Technion—Israel Institute of Technology* (**35**, 3, p. 437) Article based on AIAA Paper 96-4126 CP9611

C98-067 Aeroelastic Analysis of Transient Blade Dynamics During Shipboard Engage/Disengage Operations. William P. Geyer Jr., *U.S. Naval Air Warfare Center*; and Edward C. Smith and Jonathan A. Keller, *Pennsylvania State University* (**35**, 3, p. 445) Article

C98-068 Active Control of Store-Induced Flutter in Incompressible Flow. Prasad V. N. Gade and Daniel J. Inman, *Virginia Polytechnic Institute and State University* (**35**, 3, p. 454) Article

C98-069 Multi-Input/Multi-Output Adaptive Active Flutter Suppression for a Wing Model. M. Andrighettoni and P. Mantegazza, *Politecnico di Milano, Italy* (**35**, 3, p. 462) Article

C98-070 Incorporating Flight Data into a Robust Aeroelastic Model. Rick Lind and Marty Brenner, *NASA Dryden Flight Research Facility* (**35**, 3, p. 470) Article

C98-071 Optimal Design of Grid-Stiffened Composite Panels Using Global and Local Buckling Analyses. Navin Jaunky and Norman F. Knight Jr., *Old Dominion University*; and Damodar R. Ambur, *NASA Langley Research Center* (**35**, 3, p. 478) Article based on AIAA Paper 96-1581 CP962

C98-072 Damage Tolerance Implications of Corrosion Pillowing on Fuselage Lap Joints. N. C. Bellinger, J. P. Komorowski, and R. W. Gould, *National Research Council, Canada* (**35**, 3, p. 487) Article

C98-073 Simplified Method for Testing Finite Wings in Wind Tunnels with Two Adaptive Walls. Giuseppe P. Russo, Gennaro Zuppardi, and Filippo M. Lupo, *Università degli Studi di Napoli "Federico II," Italy* (**35**, 3, p. 492) Engineering Note

C98-074 Lift-Enhancing Tabs on Swept, Three-Dimensional High-Lift Systems. Donovan L. Mathias, *Stanford University*; Bruce L. Storms, *Sterling Federal Systems*; and James C. Ross, *NASA Ames Research Center* (**35**, 3, p. 494) Engineering Note

C98-075 Spanwise Camber and Quasisteady Effects During Wing Rock. Carlos Ize and Andrew S. Arena Jr., *Oklahoma State University* (**35**, 3, p. 495) Engineering Note based on AIAA Paper 97-0325

C98-076 Definition of Primary Flight Reference. Richard L. Newman, *Crew Systems* (**35**, 3, p. 497) Engineering Note

C98-077 Modeling Turbulence in the Presence of Adverse Pressure Gradients. M. S. Rao and H. A. Hassan, *North Carolina State University* (**35**, 3, p. 500) Engineering Note based on AIAA Paper 96-2429 CP965

C98-078 Buckling Analysis of Laminated Fiber-Reinforced Doubly Curved Shallow Shells. Maher N. Bismarck-Nasr, *Instituto Tecnológico de Aeronáutica, Brazil* (**35**, 3, p. 502) Engineering Note

C98-079 Aeroelastic Design Optimization with Experimental Verification. Jakob Kuttenkeuler and Ulf Ringertz, *Royal Institute of Technology, Sweden* (**35**, 3, p. 505) Engineering Note

C98-080 High-Incidence Airfoil Aerodynamics Improvement by Leading-Edge Oscillating Flap. F. B. Hsiao, P. F. Liang, and C. Y. Huang, *National Cheng Kung University, Taiwan, ROC* (**35**, 3, p. 508) Engineering Note

C98-081 Sweep Effect on Parameters Governing Control of Separation by Periodic Excitation. T. Naveh, A. Seifert, A. Tumin, and I. Wygnanski, *Tel-Aviv University, Israel* (**35**, 3, p. 510) Engineering Note

C98-082 Vortex-Generator Installation Studies on Steady-State and Dynamic Distortion. Bernhard H. Anderson, *NASA Lewis Research Center*; and James Gibb, *Defence Research Agency, England, UK* (**35**, 4, p. 513) Article based on AIAA Paper 96-3279

C98-083 Wind-Tunnel Aerodynamics in Rotary Tests of Combat Aircraft Models. Lars E. Ericsson; and Martin E. Beyers, *Institute for Aerospace Research, Canada* (**35**, 4, p. 521) Article based on AIAA Paper 97-0729

C98-084 Analysis of Aircraft Agility on Maximum Performance Maneuvers. Giulio Avanzini, *University of Rome "La Sapienza," Italy*; Guido de Matteis, *Politecnico de Torino, Italy*; and Luciano M. de Socio, *University of Rome "La Sapienza," Italy* (**35**, 4, p. 529) Article

C98-085 Development of Vortex Generator Use for a Transitioning High-Speed Inlet. Bruce J. Wendt, *Modern Technologies Corporation*; and Julianne C. Dudek, *NASA Lewis Research Center* (**35**, 4, p. 536) Article

C98-086 High-Performance Airfoil with Moving Surface Boundary-Layer Control. V. J. Modi, S. R. Munshi, and G. Bandyopadhyay, *University of British Columbia, Canada*; and T. Yokomizo, *Kanto Gakuin University, Japan* (**35**, 4, p. 544) Article based on AIAA Paper 96-3445 CP967

C98-087 Computational Study of Subsonic Flow over a Delta Canard–Wing–Body Configuration. Ismail H. Tuncer and Max F. Platzer, *U.S. Naval Postgraduate School* (**35**, 4, p. 554) Article based on AIAA Paper 96-2440 CP965

C98-088 Appraisal of Numerical Methods in Predicting the Aerodynamics of Forward-Swept Wings. G. Lombardi and M. V. Salvetti, *University of Pisa, Italy*; and M. Morelli, *CSIR, South Africa* (**35**, 4, p. 561) Article based on AIAA Paper 96-0289

C98-089 Experiences with Automatic Differentiation Applied to a Volume Grid Generation Code. Christian H. Bischof and Andrew Mauer, *Argonne National Laboratory*; and William T. Jones and Jamshid Samareh, *Computer Sciences Corporation* (**35**, 4, p. 569) Article based on AIAA Paper 96-0716

C98-090 Sensitivity Analysis for Transonic Unsteady Aeroelastic Constraints. R. M. Kolonay and V. B. Venkayya, *U.S. Air Force Research Laboratory*; and Henry T. Y. Yang, *University of California, Santa Barbara* (**35**, 4, p. 574) Article

C98-091 Optimized Aeroelastic Couplings for Alleviation of Helicopter Ground Resonance. Farhan Gandhi and Eric Hathaway, *Pennsylvania State University* (**35**, 4, p. 582) Article based on AIAA Paper 97-1282 CP973

C98-092 Simulation of Helicopter Rotor-System Structural Damage, Blade Mistracking, Friction, and Freeplay. Ranjan Ganguli and Inderjit Chopra, *University of Maryland*; and David J. Haas, *U.S. Naval Surface Warfare Center* (**35**, 4, p. 591) Article

C98-093 Optimum Jack Loads for Static and Fatigue Tests. Fred Austin, Theodore Balderes, and Dino George, *Northrop Grumman Corporation* (**35**, 4, p. 598) Article based on AIAA Paper 95-3988

C98-094 Similarities Between Solid and Thin-Walled Composite Beams by Analytic Approach. Omri Rand, *Technion—Israel Institute of Technology* (**35**, 4, p. 604) Article

C98-095 Aeroelastic Response of a Rigid Wing Supported by Nonlinear Springs. Todd O'Neil and Thomas W. Strganac, *Texas A&M University* (**35**, 4, p. 616) Article based on AIAA Paper 95-1404 CP952

C98-096 Nonlinear Model for Aircraft Brake Squeal Analysis: Model Description and Solution Methodology. Steven Y. Liu, James T. Gordon, and M. Akif Özbek, *The Boeing Company* (**35**, 4, p. 623) Article based on AIAA Paper 96-1251 CP964

C98-097 Nonlinear Model for Aircraft Brake Squeal Analysis: Stability Analysis and Parametric Studies. James T. Gordon, Steven Y. Liu, and M. Akif Özbek, *The Boeing Company* (**35**, 4, p. 631) Article based on AIAA Paper 96-1252 CP964

C98-098 Cost/Time Analysis for Theoretical Aircraft Production. William J. Marx, *Boeing Information, Space, and Defense Systems*; and Dimitri N. Mavris and Daniel P. Schrage, *Georgia Institute of Technology* (**35**, 4, p. 637) Article based on AIAA Paper 96-1381 CP962

C98-099 Comparison of Shock Calculation Methods. Lael vonEggers Rudd and Mark J. Lewis, *University of Maryland* (**35**, 4, p. 647) Engineering Note

C98-100 Empirical Model of Transport and Decay of Aircraft Wake Vortices. Lakshmi H. Kantha, *University of Colorado* (**35**, 4, p. 649) Engineering Note

C98-101 Low-Reynolds-Number Effects on Delta-Wing Aerodynamics. Lance W. Traub, Brian Moeller, and Othon Rediniotis, *Texas A&M University* (**35**, 4. p. 653) Engineering Note

C98-102 Effect of Aspect Ratio and Ply Orientation on Aeroelastic Response of Composite Plates. N. Sarigul-Klijn and S. Oguz, *University of California, Davis* (**35**, 4, p. 657) Engineering Note

C98-103 Multiple Attractors in Inertia-Coupled Velocity-Vector Roll Maneuvers of Airplanes. Anirudh Modi and N. Ananthkrishnan, *Indian Institute of Technology* (**35**, 4, p. 659) Engineering Note

C98-104 Mean Flow Refraction Corrections for the Kirchhoff Method. Anthony R. Pilon, *Pennsylvania State University*; and Anastasios S. Lyrintzis, *Purdue University* (**35**, 4, p. 661) Engineering Note based on AIAA Paper 97-1654 CP974

C98-105 Reconstruction of the 1994 Pittsburgh Airplane Accident Using a Computer Simulation. Edwin K. Parks, *University of Arizona*; Ralph E. Bach Jr., *NASA Ames Research Center*; and Jae Ho Shin, *University of Arizona* (**35**, 5, p. 665) Article based on AIAA Paper 98-0503

C98-106 Aerodynamic Design of Transonic Wings Using the Target Pressure Optimization Approach. Hyoung-Jin Kim and Oh-Hyun Rho, *Seoul National University, Korea* (**35**, 5, p. 671) Article based on AIAA Paper 98-0599

C98-107 Unsteady Aerodynamic Forces and Aeroelastic Response for External Store of an Aircraft. Deman Tang and Earl H. Dowell, *Duke University* (**35**, 5, p. 678) Article

C98-108 Control-Surface Reversal in the Transonic Regime. G. Andersen and R. Kolonay, *U.S. Air Force Research Laboratory*; and F. Eastep, *University of Dayton* (**35**, 5, p. 688) Article based on AIAA Paper 97-1385 CP973

C98-109 Effects of Ballistic Damage on the Aerodynamics of Helicopter Rotor Airfoils. Keith W. Robinson and J. Gordon Leishman, *University of Maryland* (**35**, 5, p. 695) Article

C98-110 Numerical Simulation of the Flowfield Around Airfoil with Stationary or Oscillating Spoiler. Ji Hong Kim and Oh Hyun Rho, *Seoul National University, Korea* (**35**, 5, p. 704) Article based on AIAA Paper 96-2509 CP965

C98-111 Secondary Correction Formula for Two-Dimensional Lift Coefficient Measured in a Wind Tunnel. Filippo M. Lupo, Giuseppe P. Russo, and Massimo Magri, *Università degli Studi di Napoli "Federico II," Italy* (**35**, 5, p. 712) Article

C98-112 Further Refinement of the Subsonic Doublet-Lattice Method. William P. Rodden, *William P. Rodden, Ph.D., Inc.*; Paul F. Taylor, *Gulfstream Aerospace Corporation*; and Samuel C. McIntosh Jr., *McIntosh Structural Dynamics* (**35**, 5, p. 720) Article

C98-113 Wing-Tip Vortex Calculations Using a High-Accuracy Scheme. David P. Lockard and Philip J. Morris, *Pennsylvania State University* (**35**, 5, p. 728) Article

C98-114 Parallel Interaction of Incident Vortex Array with Oscillating Airfoil. Cheng-Hsiung Kuo and J. K. Hsieh, *National Chung-Hsing University, Taiwan, ROC* (**35**, 5, p. 739) Article

C98-115 Airfoil Wave-Drag Prediction Using Euler Solutions of Transonic Flows. Christian Masson, *École de Technologie Supérieure, Canada*; and Charles Veilleux and Ion Paraschivoiu, *École Polytechnique de Montréal, Canada* (**35**, 5, p. 748) Article

C98-116 Modal Technique for Active Control of Tones Radiated from a Ducted Fan. Tatsuya Ishii, Hiroshi Kobayashi, and Hideshi Oinuma, *National Aerospace Laboratory, Japan* (**35**, 5, p. 754) Article

C98-117 Numerical Representation of Pitching and Nonpitching Airfoils Undergoing Linear Acceleration. Jed E. Marquart, *Ohio Northern University*; and Franklin E. Eastep, *University of Dayton* (**35**, 5, p. 761) Article based on AIAA Paper 97-0616

C98-118 Transition Closure Model for Predicting Transition Onset. E. S. Warren and H. A. Hassan, *North Carolina State University* (**35**, 5, p. 769) Article

C98-119 Frequency Effects on Dynamic Stability Derivatives Obtained from Small-Amplitude Oscillatory Testing. Douglas I. Greenwell, *Defence Evaluation and Research Agency, England, UK* (**35**, 5, p. 776) Article

C98-120 Influence of Model Complexity and Aeroelastic Constraints on Multidisciplinary Optimization of Wings. Jonathan A. Bishop, *U.S. Air Force Research Laboratory*; Franklin E. Eastep, *University of Dayton*; Alfred G. Striz, *University of Oklahoma*; and Vipperla B. Venkayya, *U.S. Air Force Research Laboratory* (**35**, 5, p. 784) Article based on AIAA Paper 91-1100 CP911

C98-121 Aeroelastic Stability Investigation of a Composite Hingeless Rotor in Hover. Anita L. Tracy and Inderjit Chopra, *University of Maryland* (**35**, 5, p. 791) Article based on AIAA Paper 96-1597 CP962

C98-122 Accuracy and Coupling Issues of Aeroelastic Navier–Stokes Solutions on Deforming Meshes. Scott A. Morton, Reid B. Melville, and Miguel R. Visbal, *U.S. Air Force Research Laboratory* (**35**, 5, p. 798) Article based on AIAA Paper 97-1085 CP973

C98-123 Fin Buffet Pressure Evaluation Based on Measured Flowfield Velocities. Christian Breitsamter and Boris Laschka, *Technische Universität München, Germany* (**35**, 5, p. 806) Article

C98-124 Accelerated Vibration Life Tests of Threadlocking Adhesive. Yubo Dong and Daniel P. Hess, *University of South Florida* (**35**, 5, p. 816) Article

C98-125 Aircraft Time Constant and Flying "On the Step." Philip D. Bridges, *Mississippi State University* (**35**, 5, p. 821) Engineering Note

C98-126 Significance of Wash-Out on the Flutter Characteristics of Composite Wings. G. A. Georghiades and J. R. Banerjee, *City University, England, UK* (**35**, 5, p. 823) Engineering Note

C98-127 Perturbation Solution of Dynamic Stability Derivatives over Pointed Bodies of Revolution. Guowei Yang and Etsuo Morishita, *University of Tokyo, Japan* (**35**, 5, p. 825) Engineering Note

C98-128 Enhanced Multiobjective Technique for Multidisciplinary Design Optimization. John N. Rajadas, Ralph A. Jury IV, and Aditi Chattopadhyay, *Arizona State University* (**35**, 5, p. 828) Engineering Note based on AIAA Paper 97-0104

C98-129 Comparison of Aeroelastic Excitation Mechanisms. Rick Lind, Lawrence C. Freudinger, and David F. Voracek, *NASA Dryden Flight Research Center* (**35**, 5, p. 830) Engineering Note

C98-130 Navier–Stokes Analysis of the Flow About a Flap Edge. Donovan L. Mathias, *California Polytechnic State University*; Karlin R. Roth, James C. Ross, and Stuart E. Rogers, *NASA Ames Research Center*; and Russell M. Cummings, *California Polytechnic State University* (**35**, 6, p. 833) Article based on AIAA Paper 95-0185

C98-131 Neural Network and Regression Approximations in High-Speed Civil Aircraft Design Optimization. Surya N. Patnaik, *Ohio Aerospace Institute*; and James D. Guptill, Dale A. Hopkins, and Thomas M. Lavelle, *NASA Lewis Research Center* (**35**, 6, p. 839) Article

C98-132 Investigations of High-Speed Civil Transport Inlet Unstart at Angle of Attack. Ge-Cheng Zha, *U.S. Air Force Research Laboratory*; and Doyle Knight and Donald Smith, *Rutgers University* (**35**, 6, p. 851) Article

C98-133 Approximate Performance of Periodic Hypersonic Cruise Trajectories for Global Reach. Preston H. Carter II, *Lawrence Livermore National Laboratory*; and Darryll J. Pines and Lael vonEggers Rudd, *University of Maryland* (**35**, 6, p. 857) Article

C98-134 Characterization of the Flowfield near a Wrap-Around Fin at Mach 2.8. C. P. Tilmann, *U.S. Air Force Research Laboratory*; T. A. Buter, *U.S. Air Force Test Pilot School*; and R. D. W. Bowersox, *University of Alabama* (**35**, 6, p. 868) Article

C98-135 Estimation of Aircraft Lateral-Directional Parameters Using Neural Networks. A. K. Ghosh, S. C. Raisinghani, and Sunil Khubchandani, *Indian Institute of Technology* (**35**, 6, p. 876) Article

C98-136 Aerodynamic Optimization Using Analytic Descriptions of the Design Space. C. A. Toomer, M. E. Topliss, and D. P. Hills, *British Aerospace (Operations), Ltd.* (**35**, 6, p. 882) Article based on AIAA Paper 96-4141 CP9611

C98-137 Comparison of Boundary-Layer Transition Predictions Using Flight Test Data. Géza Schrauf, *Daimler–Benz AG, Germany*; Jean Perraud, *ONERA, France*; Domenico Vitiello, *Alenia, Italy*; and Fung Lam, *British Aerospace Airbus, Ltd., England, UK* (**35**, 6, p. 891) Article based on AIAA Paper 97-2311 CP978

C98-138 Effect of Fuselage Geometry on Delta-Wing Vortex Breakdown. Lars E. Ericsson (**35**, 6, p. 898) Article

C98-139 Two-Dimensional Airfoil Performance Degradation Because of Simulated Freezing Drizzle. Russell Ashenden, William Lindberg, and John Marwitz, *University of Wyoming* (**35**, 6, p. 905) Article

C98-140 Characterizing the Supercooled Large Droplet Environment with Corresponding Turboprop Aircraft Response. Russell Ashenden and John Marwitz, *University of Wyoming* (**35**, 6, p. 912) Article

C98-141 Flowfield and Acoustic Measurements from a Model Tiltrotor in Hover. David R. Polak, *United Technologies Research Center*; and Albert R. George, *Cornell University* (**35**, 6, p. 921) Article

C98-142 Wake Forces Implied in the Theodorsen and Goldstein Theories of Propellers. Herbert S. Ribner, *University of Toronto, Canada*, and *NASA Langley Research Center* (**35**, 6, p. 930) Article

C98-143 Certification and Operation of Helicopters in Icing Environments. M. P. Simpson and P. M. Render, *Loughborough University, England, UK* (**35**, 6, p. 936) Article based on AIAA Paper 98-0075

C98-144 Behavior of Compression-Loaded Composite Panels with Stringer Terminations and Impact Damage. Dawn C. Jegley, *NASA Langley Research Center* (**35**, 6, p. 942) Article

C98-145 Flutter Control of Wing Boxes Using Piezoelectric Actuators. Edwin E. Forster, *Purdue University*; and Henry T. Y. Yang, *University of California, Santa Barbara* (**35**, 6, p. 949) Article

C98-146 Free Vibration of Thick Generally Laminated Quadrilateral Plates Having Arbitrarily Located Point Supports. Rakesh K. Kapania and Andrew E. Lovejoy, *Virginia Polytechnic Institute and State University* (**35**, 6, p. 958) Article based on AIAA Paper 96-1346 CP962

C98-147 Development of an Unstructured Mesh Method. Hong-Chia Lin, *National Huwei Institute of Technology, Taiwan, ROC* (**35**, 6, p. 966) Engineering Note

C98-148 Effects of Asymmetric Leading-Edge Flap Deflection on Delta Wings in Roll. Carlos Ize and Andrew S. Arena Jr., *Oklahoma State University* (**35**, 6, p. 968) Engineering Note

C98-149 Identifying Aerial Bomb's Aerodynamic Drag Coefficient Curve Using Optimal Dynamic Fitting Method. Yangquan Chen, *National University of Singapore*; Changyun Wen, *Nanyang Technological University, Singapore*; and Mingxuan Sun, *Xi'an Institute of Technology, PRC* (**35**, 6, p. 971) Engineering Note

C98-150 Arbitrary Accuracy Integration Scheme for the Subsonic Doublet Lattice Method. Louw H. van Zyl, *Aerotek, CSIR, South Africa* (**35**, 6, p. 975) Engineering Note

C98-151 Convergence of the Subsonic Doublet Lattice Method. Louw H. van Zyl, *Aerotek, CSIR, South Africa* (**35**, 6, p. 977) Engineering Note

C98-152 Rapid Prediction of Wing Rock for Slender Delta-Wing Configurations. Lars E. Ericsson (**35**, 6, p. 979) Engineering Note based on AIAA Paper 98-0498

C98-153 Correlation for the Estimation of Afterbody Drag with Hot Jet Exhaust. N. B. Mathur, *National Aerospace Laboratories, India* (**35**, 6, p. 981) Engineering Note

C98-154 Lift Enhancement of a Wing/Strake Configuration Using Pneumatic Blowing. Richard M. Howard, James G. Willson, and Craig J. Zgraggen, *U.S. Naval Postgraduate School* (**35**, 6, p. 984) Engineering Note

C98-155 Altitude Loss in a Split-'S' Maneuver. G. Iosilevskii, *Technion—Israel Institute of Technology*; and Y. Shafir, *Elbit Systems, Ltd., Israel* (**35**, 6, p. 986) Engineering Note

C98-156 Base Drag Reduction Caused by Riblets on a GAW(2) Airfoil. Channa Raju and P. R. Viswanath, *National Aerospace Laboratories, India* (**35**, 6, p. 988) Engineering Note
